FamilyKit

Brand Foundation

EVERYTHING IN PLACE.

Who we are, what we say, how we sound and how we look. One shared guide for the FamilyKit app and website.

VERSION	DATE	OWNER	PRODUCT
1.0	Nov 2026	Medhaara Innovations	FamilyKit

What's inside

01	**Who it's for**	The whole family; app first
02	**Brand core**	Promise, what it does, how it works
03	**Key messages**	Hero heading, supporting line, three benefits
04	**Tone of voice**	How we sound, including the Diary
05	**Colours**	Brand purple, accents, neutrals, status colours
06	**Typography**	Poppins and Mulish, app and website sizes
07	**Logo**	Versions, app icon, favicon, rules
08	**Visual style**	Icons, illustrations, photos
09	**Trust signals**	Our six security and privacy promises
10	**To be decided**	Open questions for the founder

How to use this guide. Every word, colour and rule in here was agreed with the founder. Use it as written. If something is not covered, or you want to change it, ask the founder first. Items still open are listed in section 10.

01 Who it's for

FamilyKit is for **the whole family**. The **mobile app is the main product**: a responsive web app (PWA). The website supports it. When in doubt, design for the phone first.

WHO IT'S FOR

The whole family

Parents, children, grandparents. Everyone a family looks after, in one shared place.

MAIN PRODUCT

The mobile app

A responsive web app (PWA) that works on any phone. Design for the phone first.

SUPPORTS IT

The website

Explains FamilyKit and brings families to the app. It follows the same brand.

02 Brand core

The three lines everything else comes from. Use them word for word.

OUR PROMISE · TAGLINE

Everything in place.

WHAT IT DOES

FamilyKit keeps a family's documents, dates, and responsibilities together.

HOW IT WORKS

You add a document. AI suggests what it says. You confirm it.

Documents
kept together

Dates
kept together

Responsibilities
kept together

Part	Exact wording	Where to use it
Promise / tagline	Everything in place.	Logo lock-ups, app splash, browser tab, sign-offs
What it does	FamilyKit keeps a family's documents, dates, and responsibilities together.	About sections, app store, first-time intro
How it works	You add a document. AI suggests what it says. You confirm it.	Onboarding, "How it works" on the website

How it really works, step by step

This is the real flow in the app. AI never saves anything on its own: the person always checks and confirms.

STEP 1
You add a document
Take a photo or upload a file.

STEP 2
AI scans it
AI reads it and suggests the details.

STEP 3
You check it
Look at what AI found. Is it right?

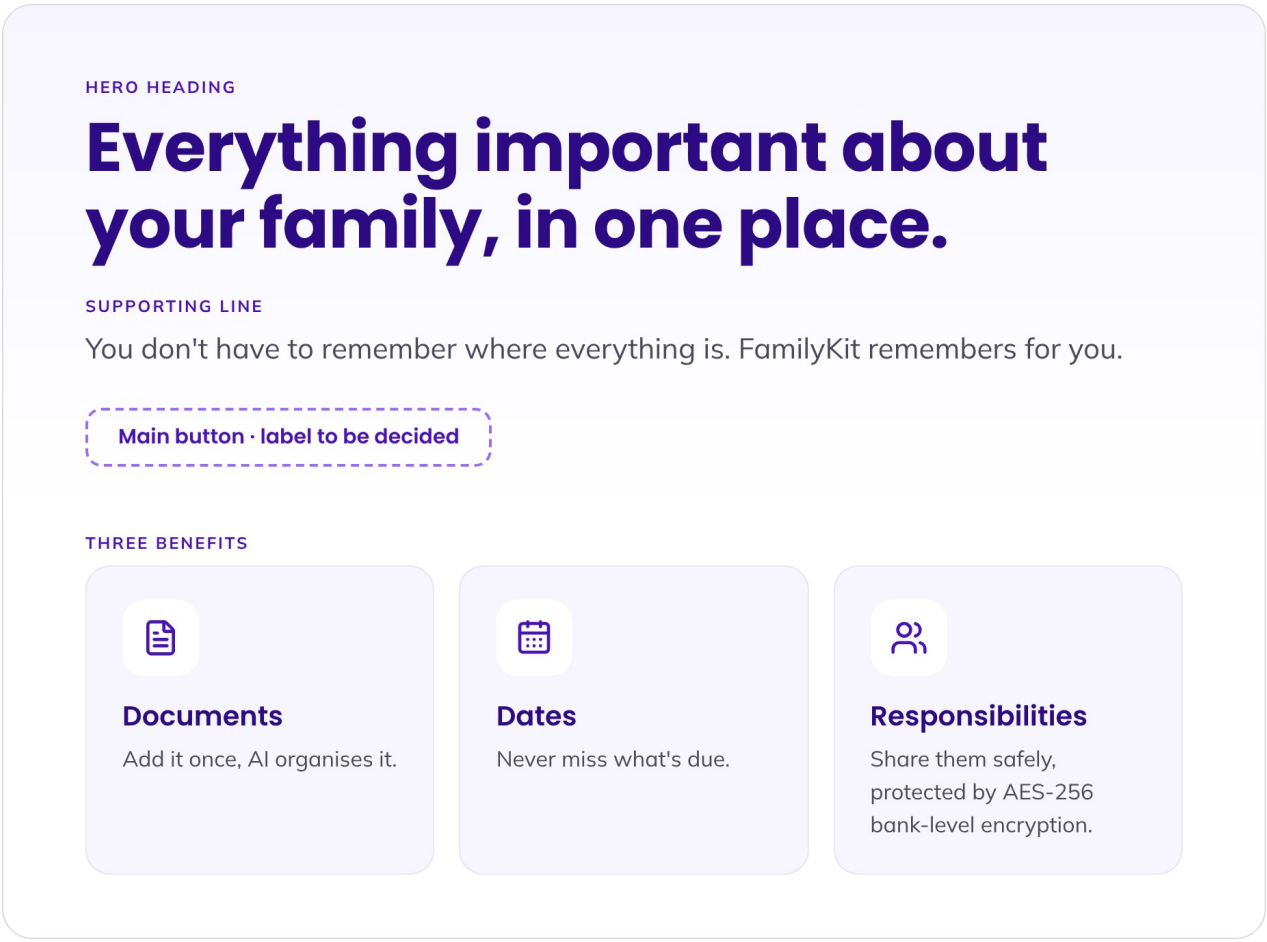

STEP 4
Edit if wrong
Fix anything that is not correct.

STEP 5
You confirm
Only then is it saved.

AI suggests, you confirm. Nothing is saved without you.

03 Key messages

The words at the top of the website and in the app introduction. Shown here as they would appear on the website.

Message	Exact wording
Hero heading	Everything important about your family, in one place.
Supporting line	You don't have to remember where everything is. FamilyKit remembers for you.
Benefit 1: Documents	Add it once, AI organises it.
Benefit 2: Dates	Never miss what's due.
Benefit 3: Responsibilities	Share them safely, protected by AES-256 bank-level encryption.

The main button label is still to be decided (see section 10).

04 Tone of voice

How FamilyKit sounds everywhere: buttons, messages, emails and the website. Five traits, always together.

Calm

No panic, no pressure. We never shout or rush people.

Clear

Short sentences and everyday words. One idea at a time.

Warm

Kind and human, like a caring member of the family.

Honest

Say exactly what FamilyKit does. Never overpromise.

Respectful of privacy

Treat family details with care. Ask, don't assume.

Say this, not that

SAY	DON'T SAY
"Your passport renews in 30 days."	"URGENT! Your passport is about to EXPIRE!"
"Check these details before you save."	"Please validate the extracted metadata."
"Something went wrong. Please try again."	"Error 500: request failed."
"Only the people you choose can see this."	"100% unhackable, totally secure."
"Who should be able to see this document?"	"Share with all your contacts?"
"Document saved."	"Awesome!!! You're crushing it! 🎉"

Writing rules

- **Short and plain.** Use everyday words. One idea per sentence.
- **Talk to one person.** Use "you" and "your family".
- **Stay calm.** No capitals for shouting, no exclamation marks in warnings, no countdown pressure.
- **Be honest.** Only promise what FamilyKit really does. Use the exact trust lines in section 09.
- **Respect privacy.** Ask before sharing. Never guess or show private details without a reason.

The Diary tone

The Diary uses the same calm voice, but softer and more personal. It never reminds, alerts or pushes. It only offers quiet, gentle prompts.

App voice
Calm, clear, helpful

- Your car insurance renews on 14 March.
- Check these details before you save.
- Document saved.

Diary voice
Same calm voice, softer and more personal

- Would you like to write about today?
- Take your time. This page is just for you.
- A quiet moment to look back on.

Never in the Diary: reminders, alerts, due dates, streaks or warnings

- ~~Reminder: you haven't written today!~~
- ~~Don't break your 7-day streak~~
- ~~Alert: Diary entry missing~~

Instead of this (alert)	Write this (quiet prompt)
You haven't written in 3 days!	Would you like to write about today?
Reminder: add an entry now	Whenever you are ready, this page is here.
Entry saved successfully!	Saved. Thank you for sharing this moment.
Don't lose your streak	(Say nothing. No streaks in the Diary.)

The rest of the app may show reminders for dates and renewals, in the calm main voice. The Diary never does.

05 Colours

One deep purple for every main action, soft lavender and a bright lime for accents, purple-tinted neutrals and clear status colours. The full colour guide is the separate document "FamilyKit Brand Colours and Type".

The colours you will use most

Use	Colour	Hex	Rule
Button (rest)	**Aa**	**#4A13B7**	The only main button colour. White text on it. One main button per screen.
Headings, button hover	**Aa**	**#2D0B84**	All headings. Also the button colour on hover.
Button pressed	**Aa**	**#21025E**	When the button is being pressed.
Focus ring	**Aa**	**#996DF8**	Lavender ring around anything selected by keyboard.
Soft lavender surface	**Aa**	**#EEE9FF**	Chips, soft panels and highlights.
Lime accent	**Aa**	**#EFFF94**	Badges and highlights only. Always dark text #130438 on lime.
Dark sections	**Aa**	**#130438**	Dark bands and footer, with white text.
Body text	**Aa**	**#4D485A**	Normal reading text.
Muted text	**Aa**	**#6B6677**	Captions and helper text. The lightest text colour allowed.
Borders	**Aa**	**#DCD9E2**	Dividers and card edges.
Page background	**Aa**	**#F7F6FA**	Soft alternate background; cards stay white.

Colour rules

DO	DON'T
Use **one main button colour**, #4A13B7, with #2D0B84 on hover and #21025E when pressed.	Don't add a second button colour (lavender, lime or another purple).
Put **dark text #130438 on lime**.	Never put white text on lime, and never use lime as text.
Use **#6B6677 or darker** for any text on white.	Never use light grey #9D99A6 or the bright status colours as text on white.
Always show a **status with an icon and a word**, not colour alone.	Don't rely on colour alone to show an error or success.
Keep bright accents rare: **one lime and one lavender highlight** per screen at most.	Don't place several bright fills side by side or behind long text.

Primary purple

Eleven even steps. Step 700 is the button, 800 the headings and hover, 900 pressed, 950 the dark bands.

FAMILYKIT PALETTE · 01

Primary · Royal Purple

One 11-step ramp built in OKLCH around the brand purple **#2D0B84**. Each step is an even jump in lightness, so 100→200 feels the same size as 700→800. Steps marked **DOC** are the exact original values.

New ramp

Contrast shown is against white (dark text on light swatches, white text on dark swatches). 600 and darker pass 4.5:1 with white, so they're safe for text and buttons.

50	100 DOC	200	300	400	500	600 DOC	700 DOC	800 DOC	900	950 DOC
1.08:1 on white L 0.97 · C 0.01	1.22:1 on white L 0.93 · C 0.02	1.47:1 on white L 0.88 · C 0.05	1.95:1 on white L 0.80 · C 0.09	2.74:1 on white L 0.70 · C 0.13	4.06:1 on white L 0.61 · C 0.17	6.21:1 white text L 0.51 · C 0.20	10.15:1 white text L 0.41 · C 0.22	14.07:1 white text L 0.31 · C 0.17	17.0:1 white text L 0.24 · C 0.14	19.05:1 white text L 0.18 · C 0.09

What the doc had

The doc's 5 steps weren't in order. "75" (#3D2184) is lighter than "Main", and "25" was much greyer than the rest.

10	25	Main	75	100
L 0.93	L 0.73	L 0.31	L 0.35	L 0.18
#EBE6F7 → primary-100 (kept)	**#AC9FCC** → replaced by 300/400 (it was greyer than the ramp)	**#2D0B84** → primary-800 (kept, headings)	**#3D2184** → removed: lighter than Main, out of order	**#130438** → primary-950 (kept)

Lightness check (OKLCH L)

Solid line: new ramp, evenly stepped. Dashed orange: the doc's 5 steps in their stated order (10, 25, Main, 75, 100). The line goes back up at "75", which is the ordering bug.

Where each step is used

- **700 #4A13B7**: primary button, links. It's the current landing button colour, now part of the ramp.
- **800 #2D0B84**: all headings and button hover. This is the brand Main colour.
- **900 / 950**: pressed state, dark bands, the footer.
- **50–200**: tinted sections, selected rows, chips.

Rules

- Text on white: use 600 or darker (≥ 6.2:1).
- Never use 400–500 for text; they're only for decoration and illustrations.
- The old #3A0E94 hover and #2E0B78 pressed are now 800 and 900.

Accents: lavender and lime

Lavender is soft and calm (surfaces, avatars, focus ring). Lime is the bright highlight, used sparingly.

FAMILYKIT PALETTE · 02

Accents · Lavender & Lime

Two accent families. **Lavender** (#B294FF) is the soft, friendly partner to the purple. **Lime** (#EFFF94) is the bright highlight. The doc's "Accent 1 Yellow" #DAD05A is now **lime-400**, a deeper step of the same family, not a third accent.

Lavender · Accent 2

Doc value is step 400. Lavender-500 #996DF8 is the focus ring (3.6:1 on white, which passes the 3:1 rule for UI parts).

Why the yellow became a lime step

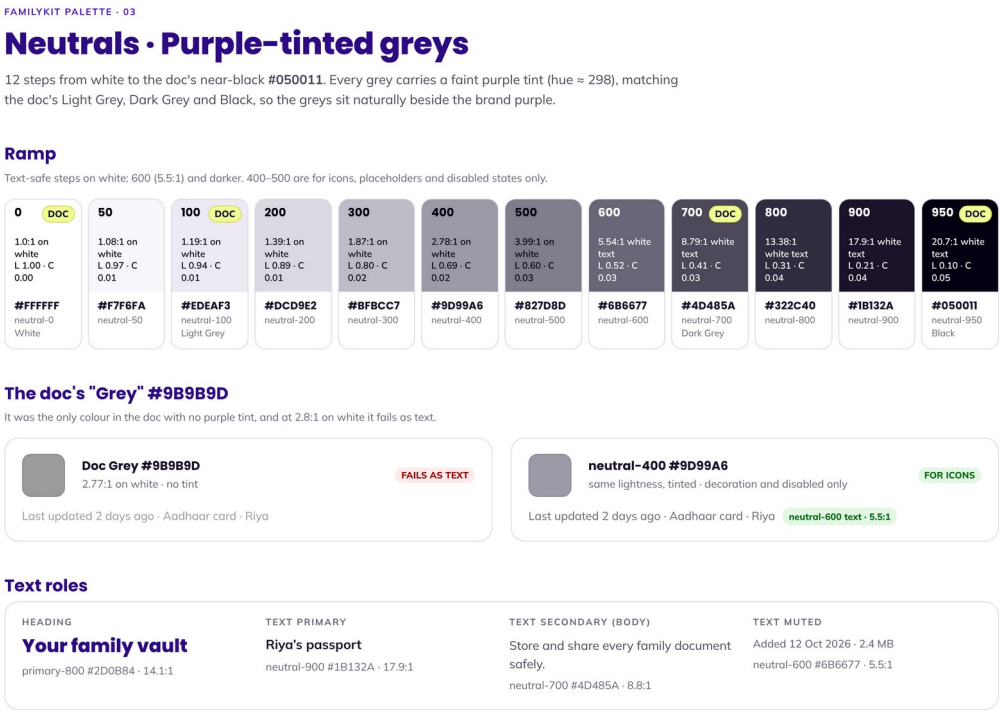

- The doc named both colours "Accent 1", and they're only 11° apart in hue. Used side by side, they look like a mismatch rather than two choices.
- As one family, the yellow gives the lime a darker partner for borders, hover and illustration shading.
- Neither colour works as text on white (1.1:1 and 1.6:1), so both stay as fills.

Approved pairings

- Lime on Main purple — New · Early access
- primary-950 text on lime-100 · 17.6:1
- primary-800 on lavender-100 · 11.9:1
- primary-950 on lavender-400 · 7.8:1

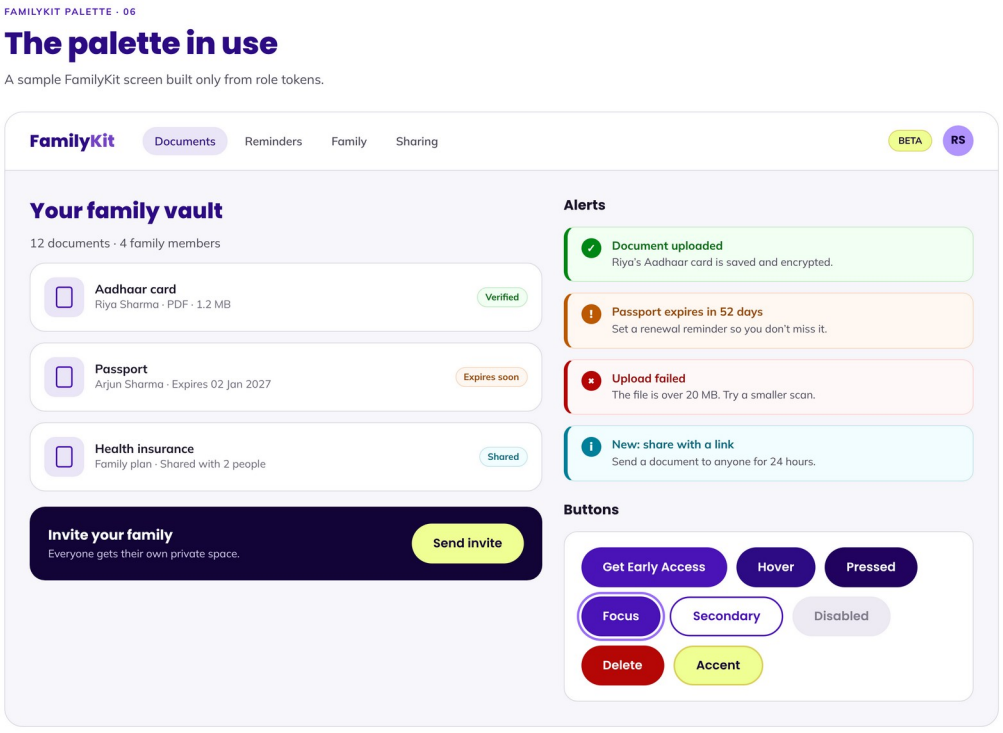

Neutrals

Purple-tinted greys for text, borders and backgrounds.

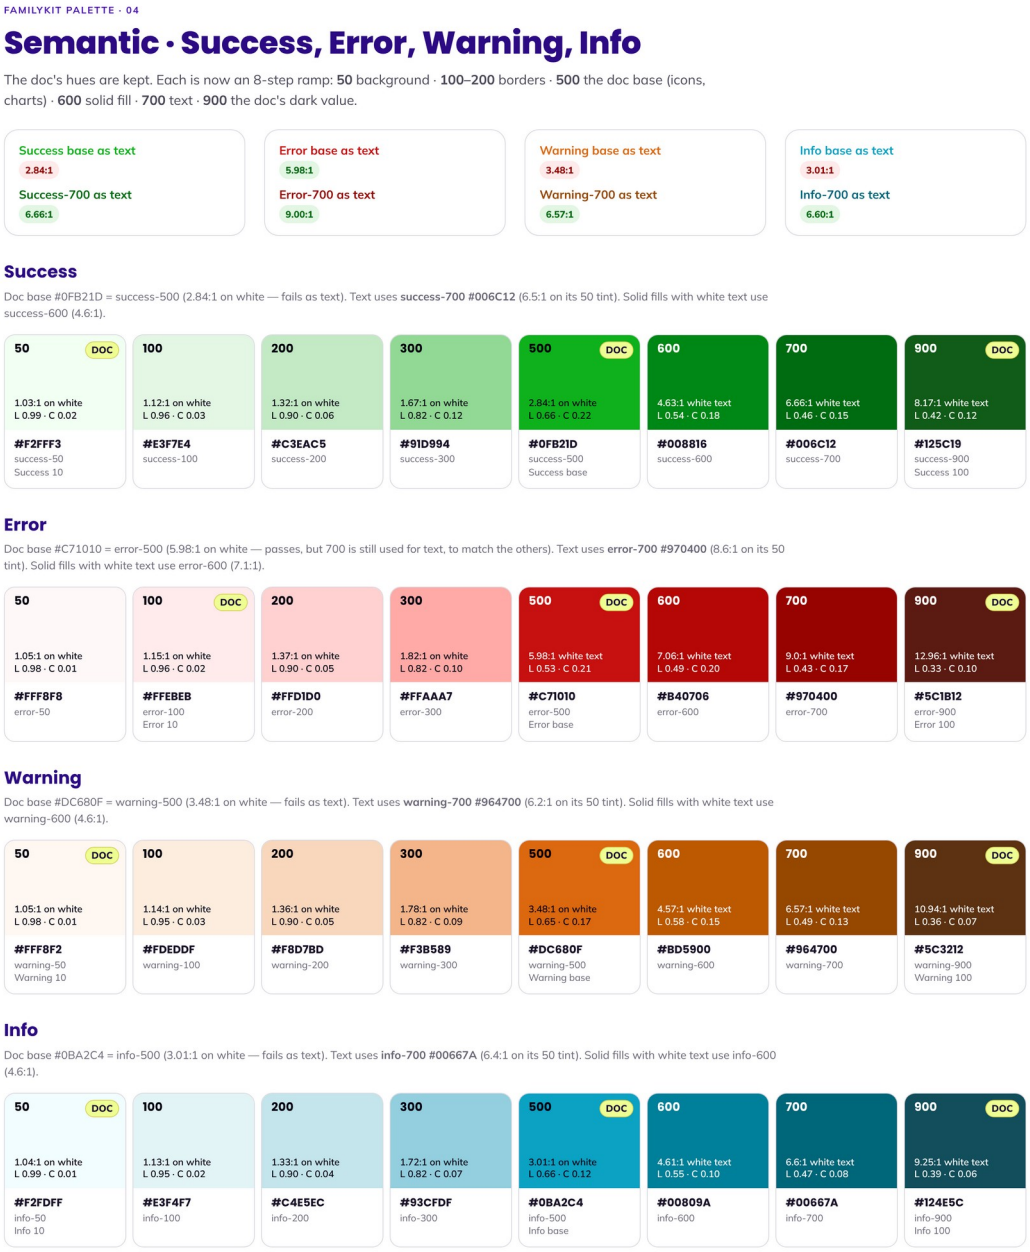

The palette in use

A sample screen built only from these colours.

Status colours

Green for success, red for errors, orange for warnings, cyan for information. Each has a safe text colour and a soft background.

Roles and contrast

Which colour to use for each job, and how well each pair passes contrast checks.

FAMILYKIT PALETTE · 05

Role tokens & contrast

Components use **role tokens** (what a colour is for), never raw ramp steps. The current landing tokens map straight across. The button stays **#4A13B7**, now as primary-700. WCAG 2.2 limits: AA text 4.5:1, AAA 7:1, large text and UI parts 3:1.

Aa White on info-600	4.61:1	AA AAA Large

Contrast check (WCAG 2.2). Every text colour in this guide passes AA (4.5:1) on white, and most pass AAA (7:1). Examples: button white text on #4A13B7 is 10.15:1, headings #2D0B84 on white 14.07:1, body #4D485A 8.79:1, muted #6B6677 5.54:1. The focus ring #996DF8 is 3.56:1, which passes the 3:1 rule for non-text parts.

06 Typography

Two fonts only. The mobile app is the main product, so app sizes come first.

Aa

Poppins

HEADINGS · BUTTONS · AMOUNTS

Screen titles, headings, buttons, tabs, ₹ amounts, stats and dates.

Aa

Mulish

BODY TEXT · LABELS

Paragraphs, descriptions, form labels, captions and helper text.

App sizes (main product)

Role	Font and weight	Size (px)
Screen title	Poppins 600	24
Section heading (H2)	Poppins 600	20
Card / list title (H3)	Poppins 600	16–18
Body text	Mulish 400	15
Buttons	Poppins 500–600	14–15
Labels and captions	Mulish 600	12–13

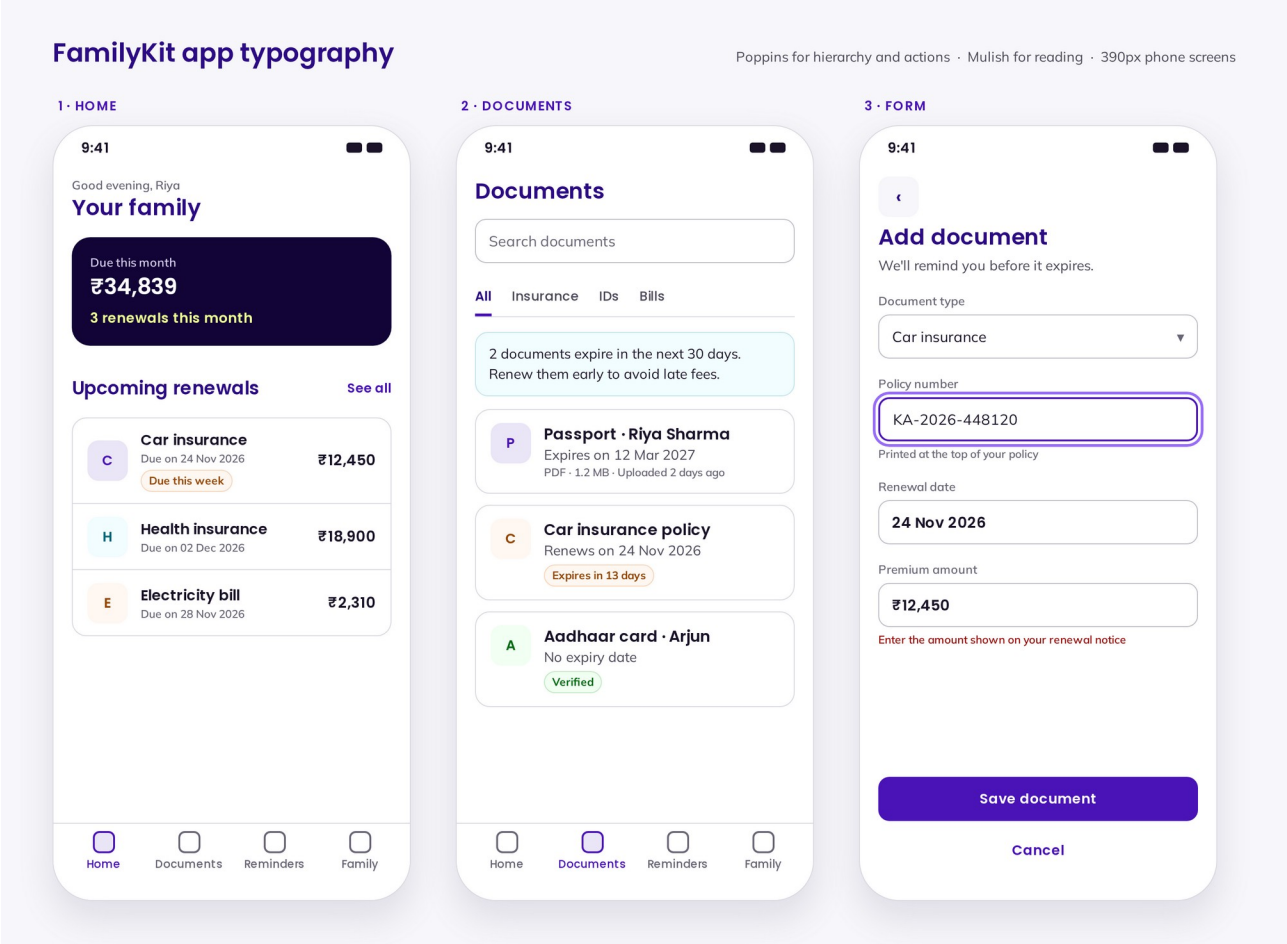

Website sizes

Role	Desktop (px)	Mobile (px)
H1 (hero heading)	56	32
H2	40	28
H3	22	18
Body text	16	15

Amounts: Poppins numbers are not all the same width, so they do not line up in columns. Right-align amount columns for now. Using Mulish for amount columns is still to be decided (section 10). **Smallest text anywhere: 12px.**

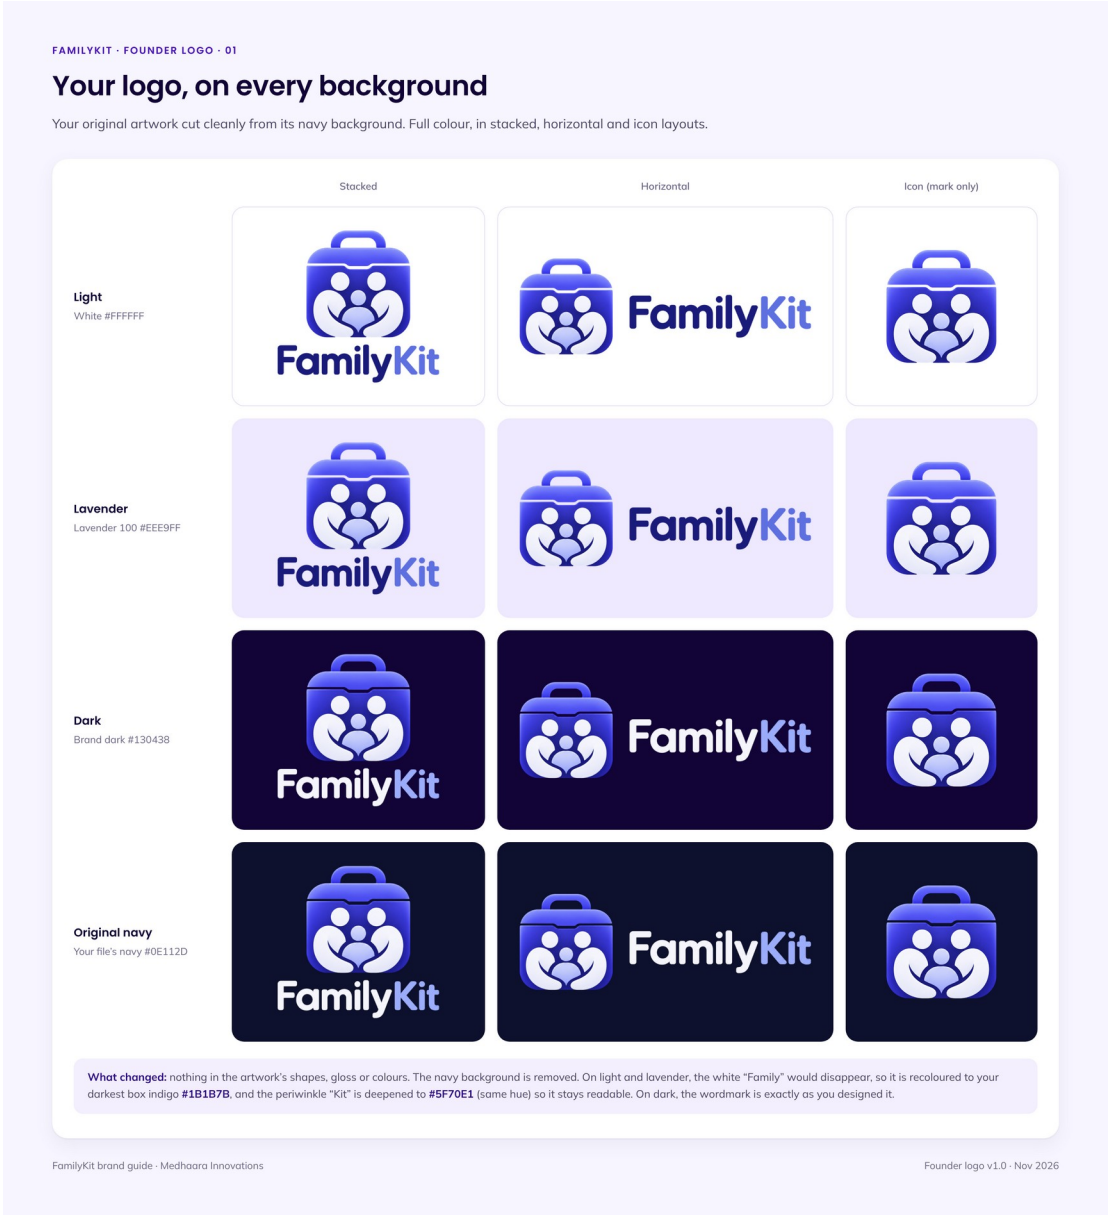

Typography in use

The type scale on real app screens.

07 Logo

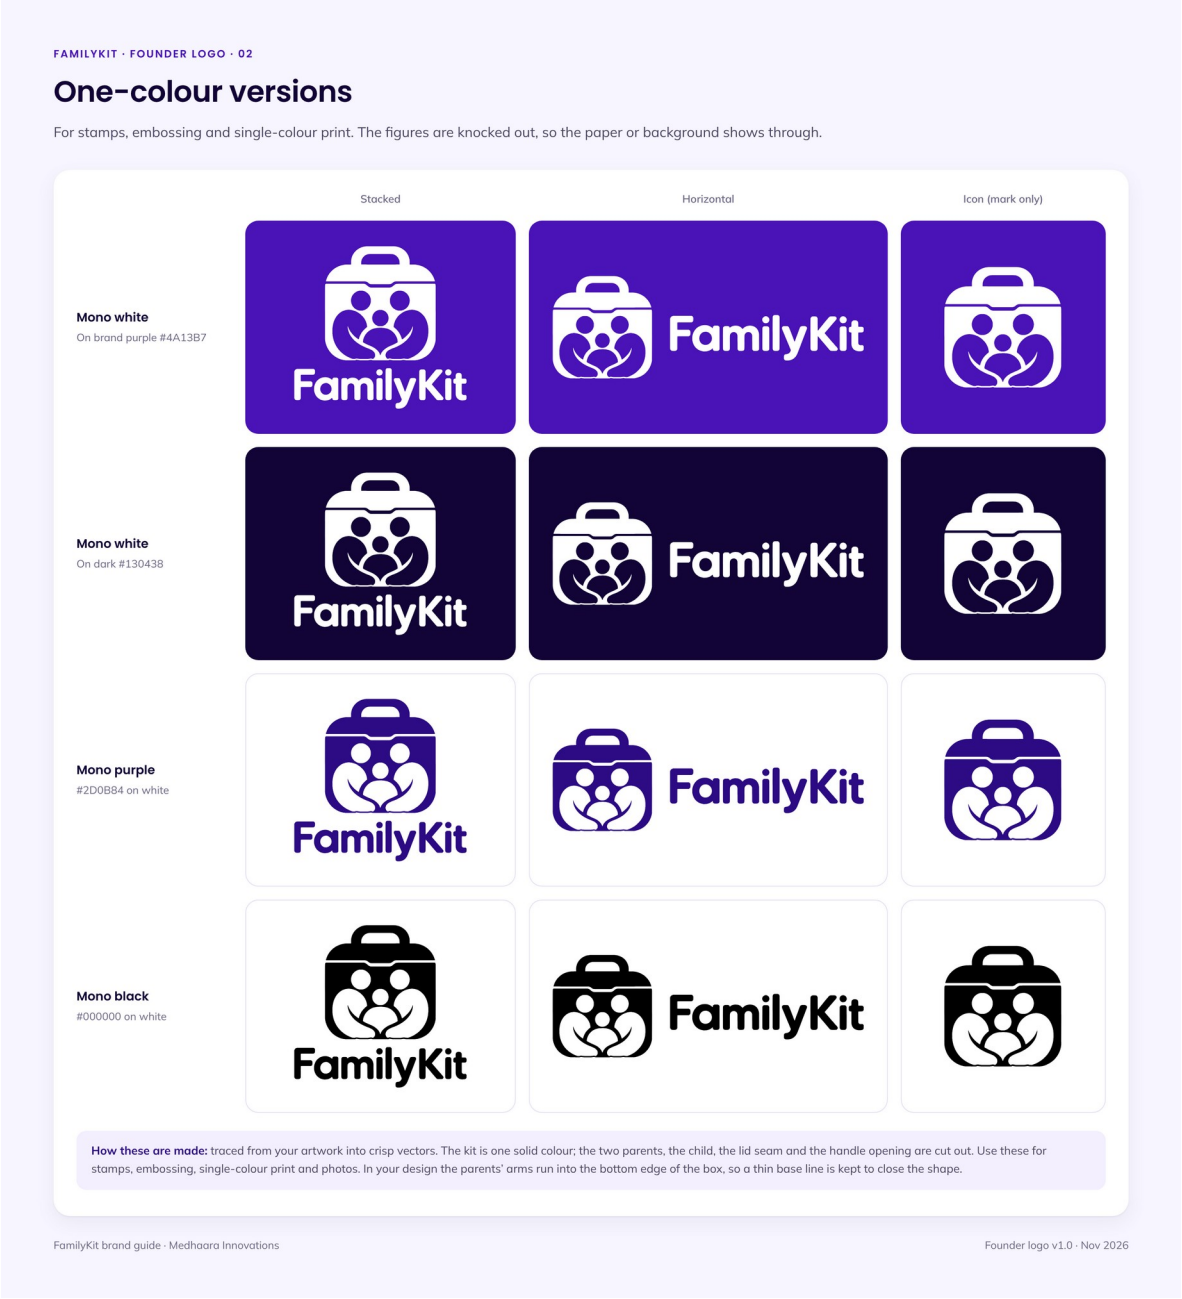

The FamilyKit logo is the founder's own design: a glossy indigo kit box with two parents cradling a child. Use the supplied files exactly as they are. Never redraw it.

Light backgrounds: "Family" in #1B1B7B and "Kit" in #5F70E1, so the name stays readable. **Dark backgrounds:** the original colours, exactly as designed (white "Family", periwinkle "Kit").

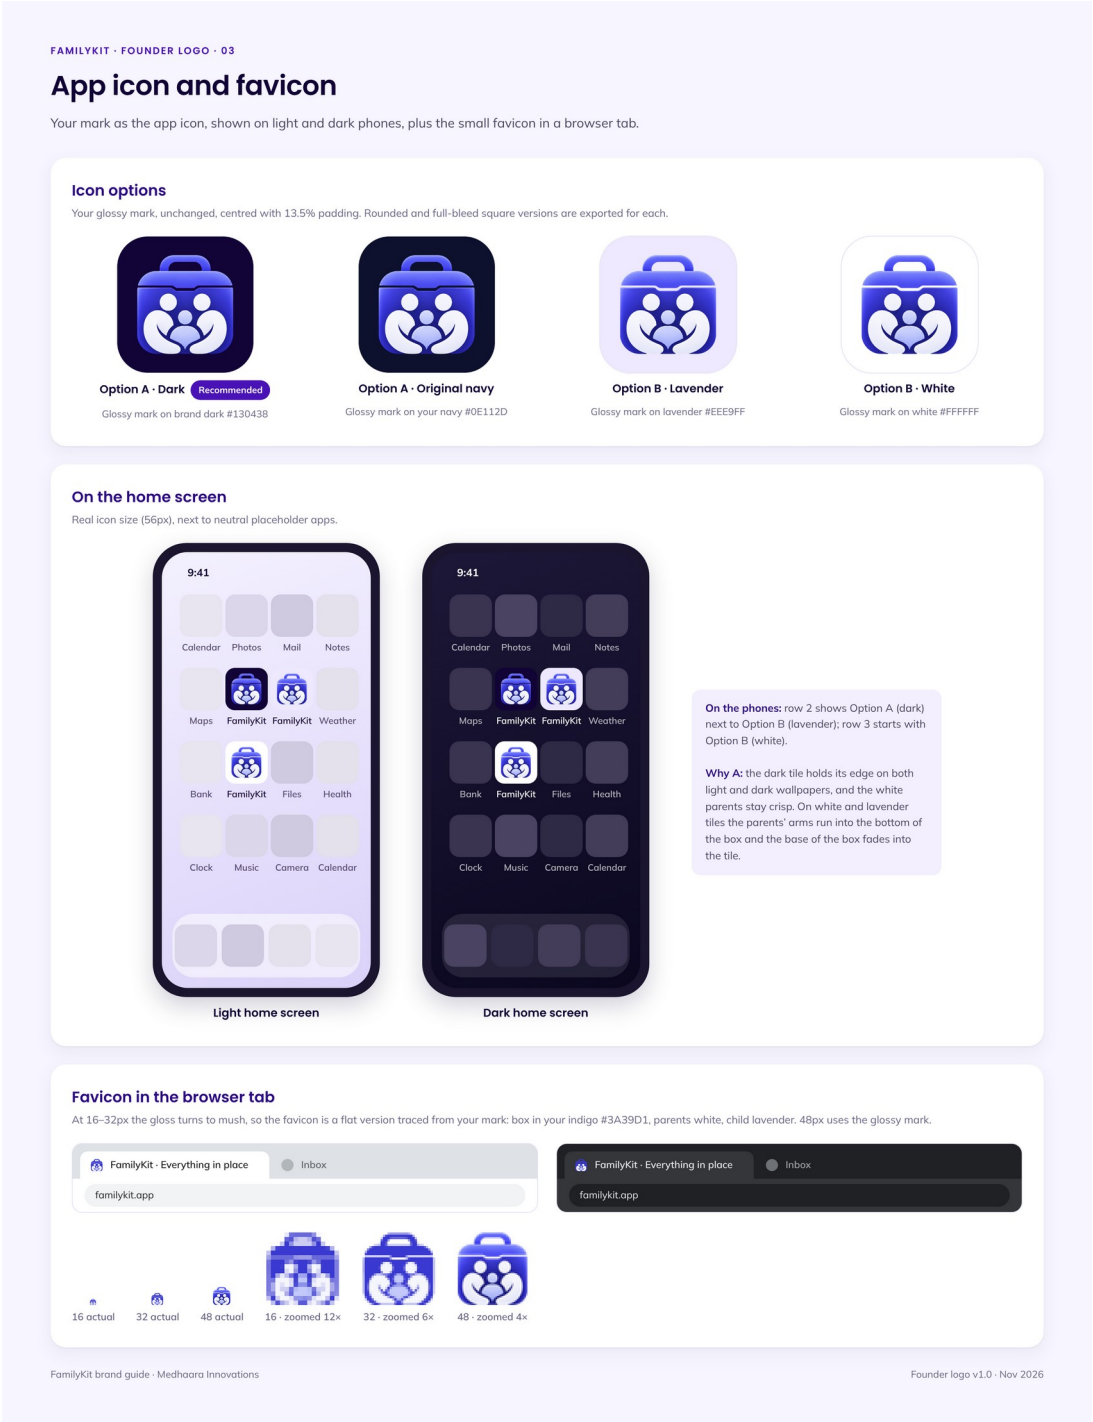

One-colour versions

For stamps, embossing and single-colour print. The family figures are cut out so the paper shows through.

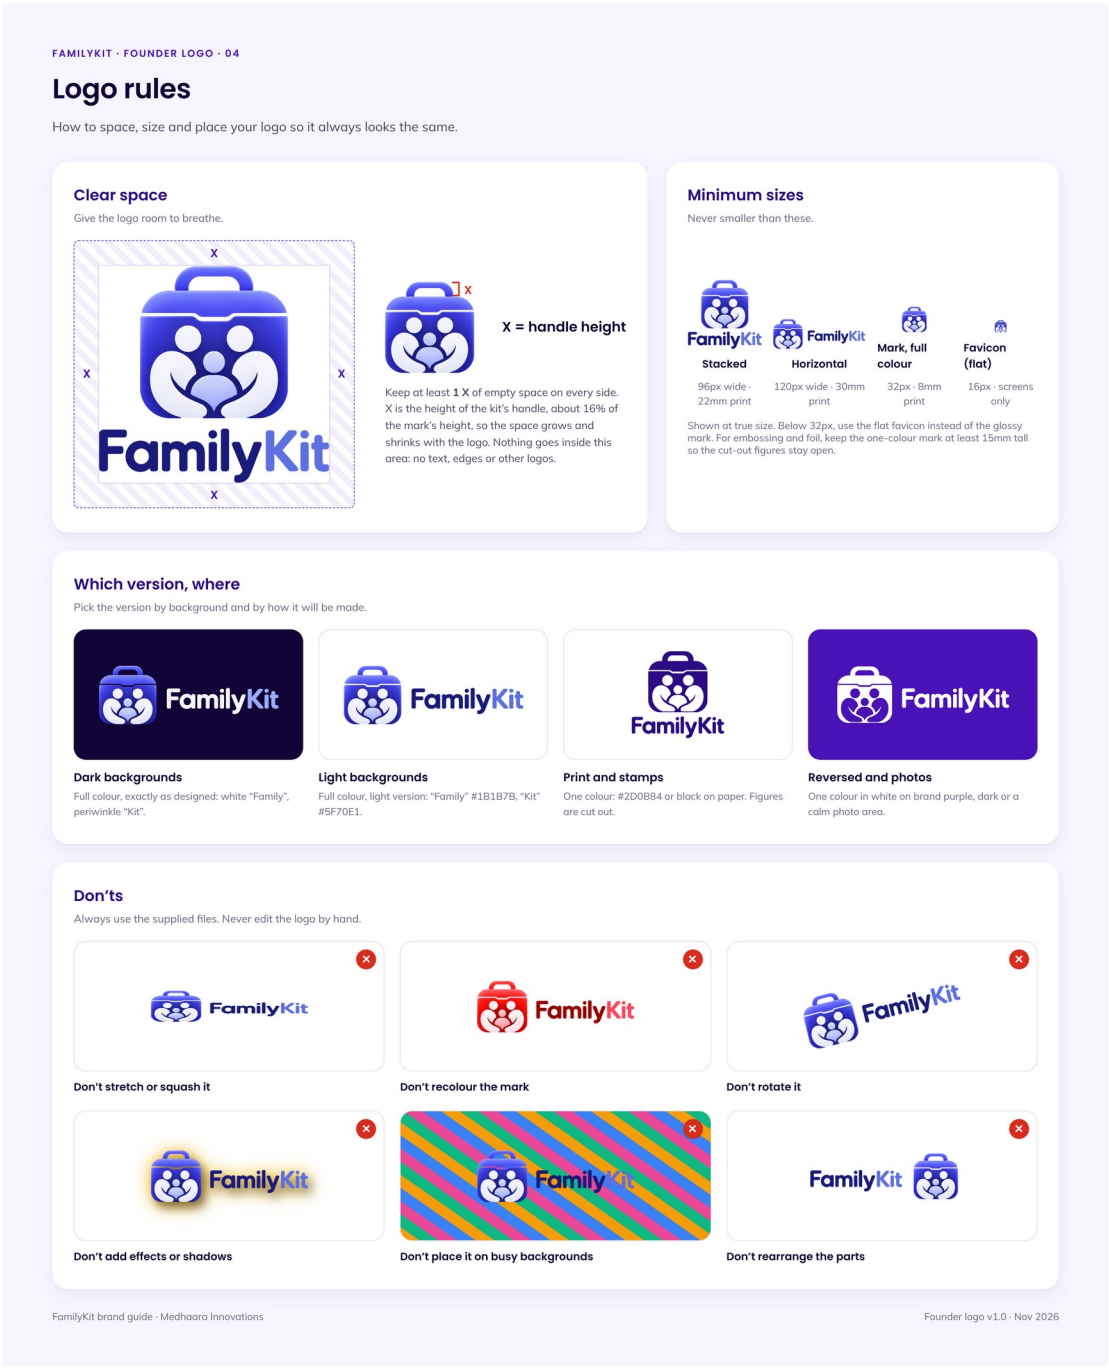

App icon and favicon

App icon: Option A, the glossy mark on brand dark #130438. It stands out on both light and dark phones. **Favicon:** at 16–32px the gloss turns blurry, so the browser-tab icon uses a simplified flat version of the logo at that size only.

Logo rules

Clear space = the height of the kit's handle, on every side. **Minimum sizes** are shown on the sheet below. **Six don'ts:** never stretch, recolour, rotate, add effects or shadows, place it on busy backgrounds, or rearrange the parts.

Logo files

All files are in the fk-logo/founder folder. Pick the file by where the logo will be used.

Folder	What is inside	Use it for
png/	Full colour logo with a transparent background: mark, stacked, horizontal and wordmark, each in an on-light and an on-dark version (normal and @2x).	Website, app, presentations
png/flat/	Logos placed on white, lavender #EEE9FF, dark #130438 and the original navy, plus one-colour versions on their backgrounds.	Quick use in documents and slides
png/mono/	One-colour logos with transparent background: white, black and purple #2D0B84.	Stamps, embossing, single-colour print
svg/	Vector one-colour logos (black, white, purple #2D0B84) for every layout.	Large print, signage, merchandise
png/app-icon/	App icons on dark (Option A), navy, white and lavender: rounded, App Store, Apple touch and maskable sizes.	App stores, phone home screen (use dark)
png/favicon/	favicon-16 and -32 (flat), favicon-48 (glossy), favicon.ico and favicon.svg.	Browser tab and bookmarks
review/	The four review sheets shown in this section.	Reference only

Not for use: the earlier redrawn logos in fk-logo/svg, fk-logo/png and fk-logo/review were rejected. Use only the fk-logo/founder files.

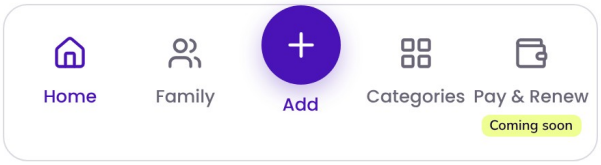

08 Visual style

One look across icons, illustrations and photos: simple, calm and warm.

Icons: Lucide, outlined, rounded

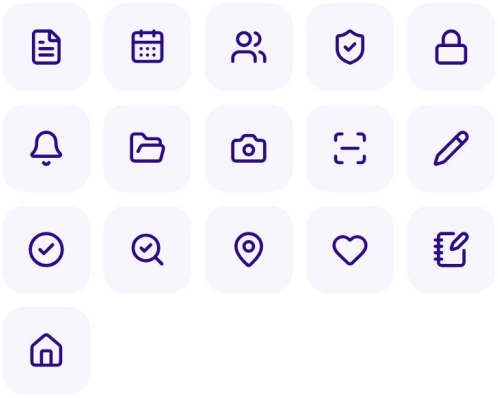

All icons come from the free Lucide set. They are outlined, with rounded ends that match the soft shapes of the logo.

CURRENT APP NAVIGATION

Active tab in button purple #4A13B7, others in muted #6B6677.

SAMPLE SET · LUCIDE

Do

- Use only Lucide icons, outlined
- Keep the 2px stroke and rounded ends
- Use 24px in lists, 20px inside buttons
- Always pair an icon with a word in navigation

Don't

- Mix in filled icons or other icon sets
- Change the stroke weight per icon
- Use lime or light grey for icons on white
- Use an icon alone where its meaning is unclear

Illustrations: one simple flat style

Used only for empty screens and onboarding, in brand purples and lavender.

Example: an empty screen

Simple shapes, soft rounded corners, flat colour, no gradients.

Style sample only, not final artwork.

ILLUSTRATION COLOURS

#2D0B84	#4A13B7	#996DF8	#B294FF	#C8B5FF	#DDD3FF	#EEE9FF
800	700	Lav 500	Lav 400	Lav 300	Lav 200	Lav 100

Where to use

- Empty screens (nothing added yet)
- Onboarding (first steps in the app)

Rules

- One style everywhere: flat, simple, rounded
- Brand purples and lavender only
- No 3D, no gradients, no clip-art mix
- Calm scenes: never alarming or busy

Photos: real families, at home

Real Indian families at home in natural light. Calm and warm, never a stock-office feel.

Real Indian families

Parents, children and grandparents, as they really are.

At home

Living rooms, kitchens, dining tables. Everyday places.

Natural light

Soft daylight from windows. Never harsh flash.

Calm and warm

Relaxed, natural moments. Quiet smiles, not posed grins.

Choose photos that

- Feel like a real family's home
- Show people together, at ease
- Leave calm space for text
- Have soft, warm colour

Avoid photos that

- Look like stock office scenes
- Show suits, desks or handshakes
- Are staged, glossy or over-edited
- Show real documents or private details

Where to find photos: choose real, natural-light photos of Indian families at home. Check that every photo has the right to be used, and that no real document, ID number or private detail is visible.

09 Trust signals

Six promises that help families feel safe. Use this exact wording. Do not shorten, combine or add to it.

BANK-LEVEL SECURITY
“Protected by AES-256, the same encryption banks use.”

STORED IN INDIA
“Your family's data stays in India.”

PRIVATE AI
“Our AI never uses your documents to train.”

YOU DECIDE
“AI suggests, you confirm. Nothing is saved without you.”

YOU STAY IN CONTROL
“Only the people you choose can see your documents.”

NEVER SOLD
“We never sell or share your family's information.”

Never claim "end-to-end encryption" or "zero-knowledge".
FamilyKit uses AES-256, bank-level encryption. Say exactly that, nothing more.

Promise	Exact wording
Bank-level security	Protected by AES-256, the same encryption banks use.
Stored in India	Your family's data stays in India.
Private AI	Our AI never uses your documents to train.
You decide	AI suggests, you confirm. Nothing is saved without you.
You stay in control	Only the people you choose can see your documents.
Never sold	We never sell or share your family's information.

10 To be decided

Three small questions are still open. Until the founder decides, the rest of this guide stays as written.

#	Question	Options	Why it matters
1	**Main button label**	"Join waitlist" or "Get Early Access"	Appears on the website hero and every sign-up button.
2	**Pricing section on the website**	Show a pricing section now, or not yet	Changes the website page layout.
3	**Font for amount columns**	Use Mulish for amounts in columns, or keep Poppins right-aligned	Poppins has no same-width (tabular) numbers, so amounts in columns do not line up.

Decision log. Founder's answer and date:
1. _____
2. _____
3. _____
